Serial No. 10/510,315

Atty. Doc. No. 2002P03969WOUS

Amendments To the Claims:

Please amend the claims as shown.

1-10. (canceled)

11. (currently amended) A web server comprising software modules having at least a first

software module, the one or more software modules -comprises providing a first mechanism for

implementing an automation functionality and a second mechanism to directly access the real-

time communication level of a real-time Ethernet.

12. (previously presented) The web server according to claim 11, wherein the web server

comprises a connection to a communication network.

13. (previously presented) The web server according to claim 12, wherein the communication

network is the Internet.

14. (previously presented) The web server according to claim 11, wherein Internet protocols are

provided for communication between the software modules and for communication between the

software modules and components outside of the web server.

15. (previously presented) The web server according to claim 12, wherein Internet protocols are

provided for communication between the software modules and for communication between the

software modules and components outside of the web server.

16. (previously presented) The web server according to claim 11, wherein the web server is

adapted for configuration and administration of the software modules.

17. (previously presented) The web server according to claim 12, wherein the web server is

adapted for configuration and administration of the software modules.

18. (previously presented) The web server according to claim 14, wherein the web server is adapted for configuration and administration of the software modules.

19. (previously presented) The web server according to claim 11, wherein the first software module comprises a connection to an industrial automation system.

20 - 22. (canceled)

23. (previously presented) The web server according to claim 11, wherein the web server comprises a connection to the Internet via a firewall.

24. (previously presented) The web server according to claim 11, wherein the web server is connected via a communication network to a web browser as a control and monitoring system.

25. (previously presented) The web server according to claim 12, wherein the web server is connected via a communication network to a web browser as a control and monitoring system.

26. (previously presented) The web server according to claim 14, wherein the web server is connected via a communication network to a web browser as a control and monitoring system.

27. (previously presented) The web server according to claim 11, wherein the web server comprises a real-time operating system.

28. (previously presented) The web server according to claim 12, wherein the web server comprises a real-time operating system.

29. (currently amended) An automation system comprising a web server having software modules, comprising wherein at least a first software module comprises a first mechanism for implementing an automation functionality and a second mechanism to directly access the real-time communication level of a real-time Ethernet.

Serial No. 10/510,315

Atty. Doc. No. 2002P03969WOUS

30. (currently amended) A computer program product comprising a web server <u>software</u>, <u>configured to operate on a web server</u>, having <u>one or more</u> software modules, <u>the wherein at least a first software comprising module comprises</u> a first mechanism for implementing an automation functionality and a second mechanism to directly access the real-time communication level of a real-time Ethernet.

- 31. (new) The web server of claim 11 wherein the first mechanism is a controller of components and processes, wherein the web server includes a TCP/IP stack and wherein direct access to the real-time communication level is effected by a direct connection between the TCP/IP stack and an automation device with communication by means of a TCP/IP-based real-time ethernet protocol.
- 32. (new) The automation system of claim 29 wherein the first mechanism is a controller of components and processes, wherein the web server includes a TCP/IP stack and wherein direct access to the real-time communication level is effected by a direct connection between the TCP/IP stack and an automation device with communication by means of a TCP/IP-based real-time ethernet protocol.
- 33. (new) The computer program product of claim 30 wherein the first mechanism is a controller of components and processes, wherein the web server includes a TCP/IP stack and wherein direct access to the real-time communication level is effected by a direct connection between the TCP/IP stack and an automation device with communication by means of a TCP/IP-based real-time ethernet protocol.
